DETAILED ACTION

Election/Restrictions

Claims 4-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected claimed inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 10.

Applicant's election with traverse of the restriction in Paper No. 10 is acknowledged. The traversal is on the ground(s) that the accelerating process of group II and the film layer of group III do not have separate utility from group I and it is possible to search all of the claims of the present invention together. This is not found persuasive because the maintenance of the magneto-rheological substance can be carried out without the accelerated bonding process of II or using the specific film of III. The searches for groups II and III require differing considerations than that of I.

The requirement is still deemed proper and is therefore made FINAL.

Drawings

Figures 7-8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to

identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-3 and 14-21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No.

6,581,740 in view of Szalony [US 6,528,110].

Szalony '740 discloses the use of mechanical device formed of a plurality of magneto-rheological impregnated metal plates [10].

Szalony '740 discloses the instant claimed invention except for the specific method of maintaining the substance in a static position.

Szalony '110 discloses the use of an electric charge or magnetic field to maintain an impregnated substrate in a static state.

It would have been obvious to a person having ordinary skill in the art at the time invention was made to use the method of Szalony '110 for the component plates of Szalony '740 for the purpose of maintaining the necessary friction to operate the device.
